

## IKS9

### Incremental Magnetic Sensing Head

The incremental sensing head IKS9 from BOGEN delivers reliable results in all industrial areas where positions, distances and speeds have to be measured. IKS9 features an accuracy of better than 10  $\mu\text{m}$ , a travel speed of up to 100 m per second, an almost unlimited measuring length and a robust design. Numerous adjustable parameters allow the customer to easily adapt the IKS9 to application-specific needs. IP67 protection class allows use even in harsh environments. In combination with an appropriate scale - linear, rotary-radial or rotary-axial - a highly accurate, reliable and fast acquisition of measurement data is possible.

## LED Error Codes (Order Parameter E1)

The amount of flashing signs of the red LED indicates the fault. It starts after a fast pulsed light.

The example displays a weak and fluctuating magnetic field (fault 2 and 3).

LED flashing signs amount	description
1	magnetic field strength is too high
2	magnetic field strength is too low
3	the range of the magnetic fluctuation is too large
4	output frequency is too high
5	movement speed is too high
6	movement speed is much too high (latched)
7, 8	movement speed too high for internal signal processing with current programming (latched)
9, 10, 11	internal error 9, 10, 11 (latched)
